

#TODO arch_install: pre svega, mozda namestiti pacman config da bude lep dok se sve skida, ako moze bez sed, bilo bi super

#TODO USER - BEFORE INSTALL * set your graphics card drivers

#TODO USER - AFTER INSTALL: * change ~/.config/git/config * visudo, add yourself to wheel and make it so password isn't required(TODO: this is perhaps possible to automate)

#TODO backup: * dafuq is .config/zsh/.zcompdump?, vrv ne treba da bude u backupu * proveriti u virtual machine da li sve radi pre nego sto obrisem trenutni arch sistem * videti da pre nego sto pacman -S sway, prvo skinem mesa drivere ili one druge, treba videti koji se nude od ta 2 * mozda staviti da se bluetooth module pali tek kada upalim sway? https://wiki.archlinux.org/index.php/Sway#Manage_Sway-specific_daemons_with_systemd * vim :PlugInstall i dalje nije automatski izgleda, ako budes automatizovao pazi posto se skripta nece raditi kao user account nego kao admin account * da pita za username, i onda je full instalacija sa sudo account-a, i da pita za driver koji se koristi, nvidia ili mesa * brave/firefox, njihovi settings i bookmarks potencijalno, ako budem njih dodavao, neka bude van github repositoryja, nego gitignore

#TODO RICE (prio 1): * swaybar, waybar, * zscroll, * luke smith video za temperature, ima jos nesto, ima video na jutubu za zscroll * workspace-ovi ima na youtube-u i na unixporn ideje, msm da imam jednu dobru u bookmarks

- * brave working with video playback
- * rofi, wofi
- * bluetooth
- * fade (kao compton)

rice (prio 2)

- * all floating shit, dodati i u fedora setup
- * na sway-u mi se cini da resize nije konstantne brzine nego se menja sa velicinom prozora
- * aur
- * dodati padding na alacritty
- * zsh da ne smara na auto-completion-u, videti da neka smaranja ostanu, npr ona sto retko b
- * kul fonts

Downloaded compressed packages are still kept on the system at /var/cache/pacman/pkg/

Arch komande se obicno sastoje od prvo jednog velikog slova(e.g., S, R, Q) i mnogo malih slova.

pacman -S, sync(install/update) package

pacman -Syu, synchornize package database and upgrade whole system(recommended) pacman -Sy, synchronize package database(not recommended) pacman -Su, upgrade whole system(not recommended)

pacman -Sy, kad ima 2 y, tera ga da update-uje database iako je keshiran
update od malo pre pacman -Sw, skine, ali i ne instalira nego ostavi download
file, pa ti sam moras posle instalirati

pacman -Ss, search all packages in title and description

pacman -R, remove package pacman -Rs, remove package and its unused depen-
dencies pacman -Rn, remove package and its system config files

pacman -Rsn, best for removing a package

pacman -Q, prints all installed packages pacman -Qe, prints all explicitly installed
packages pacman -Qq, does not print out the version, only the program name (q
radi skoro svuda)

pacman -Qdt, list of orphans

pacman -Qs, search for locally installed packages

pacman -Si, information for a package

pacman -Qi, information for a locally installed package U file-u /etc/pacman.conf:
